DESCRIPTIONS: Magnetism. *Magnetic fields. *Induct-
ance. Ferromagnetic materials. Magnetic properties.

It is deduced from the Preisach diagram that at low
field strength, the difference between ideal magnetiza-
tion and the remanence is equal, according to the oc-
cupancy function present, either to the magnetization
on the new curve or to the reversible magnetization.
That is, the relative remanence of ideal magnetization
should be greater, the greater the ratio of initial slope
of the ideal magnetization curve to initial permeability
(Physica--Magnetism, TT. v. 10, no. 11) (over)
